

DATE.....

⇒ Working with variables (Arithmetic operations)

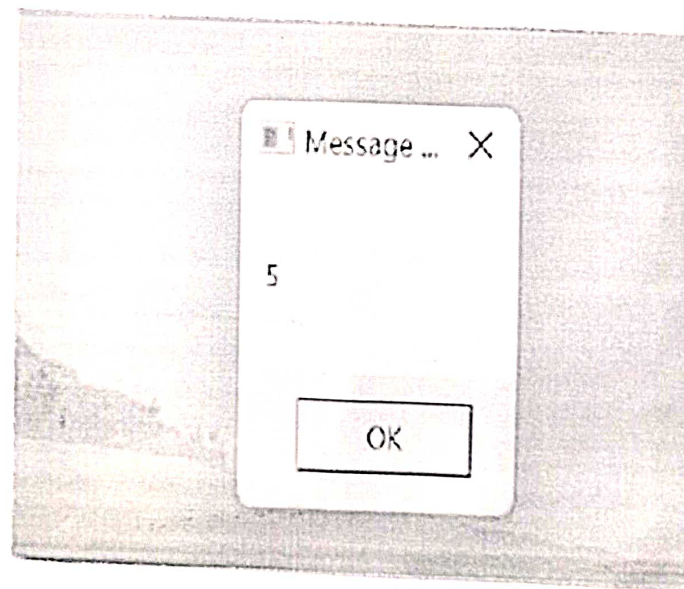

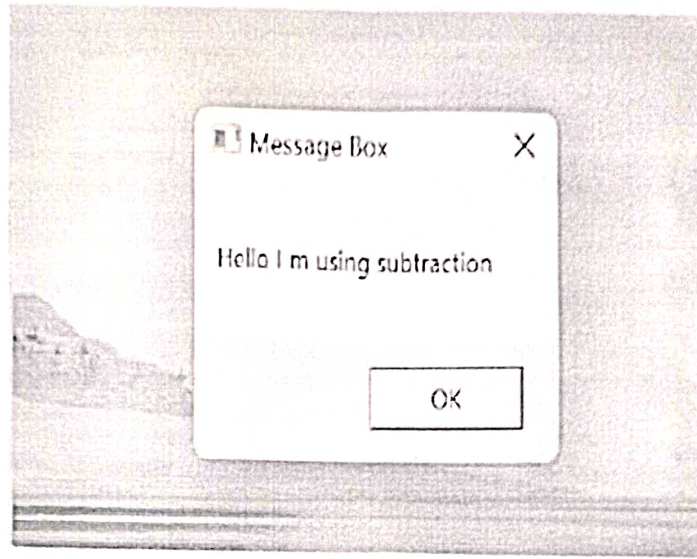

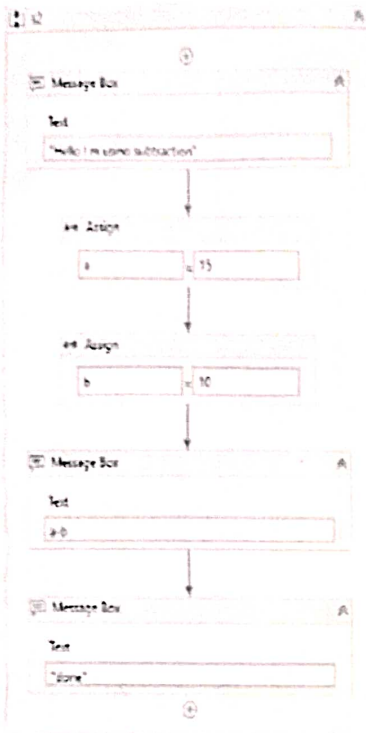

Addition:- → We create sequence and go to assign in this way. We also create variables. But in this case, we use input dialog and declare the variable

→ We get the output on the main desktop.

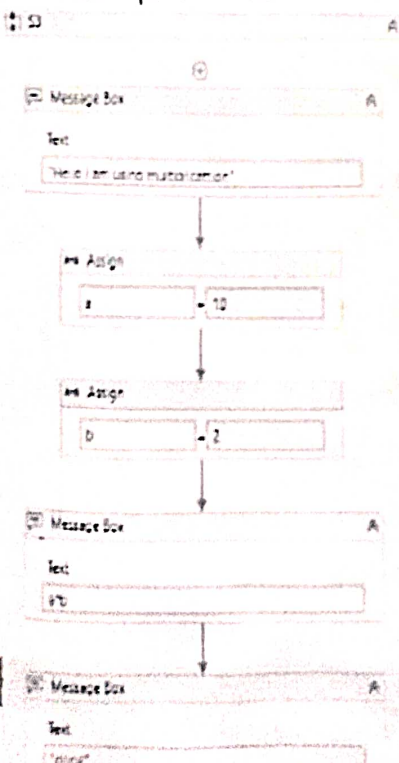

Subtraction:- → We create sequence first then we go to the input dialog and declare the variables with help of control and k.

→ The integer (marks) in integer type and name should be in string data type.

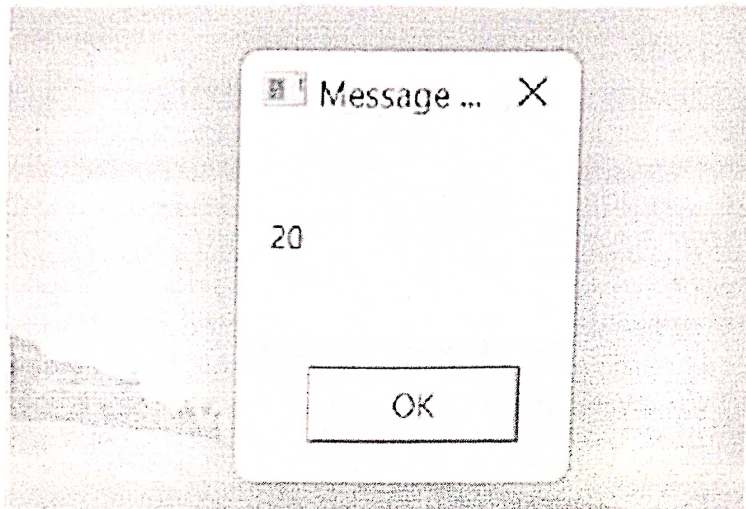

Multiplication:-

- We create sequence and go to the input dialog and declare the variable.
- The output is displayed on main desktop.

DATE.....

EXP. No. 4

Division:-

- We create sequence and get input dialog and declare variable.
- output is declared on main desktop.
