⇒ Create a bot to open a substitute and search what you needed and upload the data on an excel sheet.

→ First of all we create a sequence.

→ We open browser and then type into what type of material we needed.

→ Then go to click option and point the cursor to search option.

→ Now, we go to data scrapping and a dialog box will appear, we fulfill the needs which the dialog box wants.

→ After clicking next, there is an option extra co related data in which max number of results by default =100, we minimize it.

→ Then, click on finish and then on multispaces again click on next and datatable of extract type is used.

→ We used write CSV to create on excel file.

→ Also, use a message box to check the program is done.
