DATE...............

⇒ Construct a bot to get data from excel sheet.

→ Create sequence, then use excel application scope and select a file.

→ Now use read range then select variable 'dt' for each row.

→ In the body, we use message box to get the data.

→ At last, our output will be displayed on screen.

demo_excel

Excel Application Scope

"C:\Users\student\Documents\Book1.xlsx"

Do

Read Range

"Sheet1"

For Each Row

ForEach row   in dt

Body
